Bed Bug Education

- While education can be conducted by distributing educational materials and providing training, it can only be effective if it results in changes in behavior.
 - Ability to accurately identify bed bugs
 - Monitor for early detection (new & existing)
 - Where to go for more technical information
 - Open communication about an infestation
 - Leads to cooperatively solving a problem rather than assigning blame

- Adults 1/4 to 3/8" long
- Brown to reddish brown
- Oval shaped and flattened
- Beak-like mouthparts
- Wingless

- Fast-moving
- Cannot fly or jump
- Cling tightly to surfaces
- Flattened- can easily fit in <u>narrow cracks</u> and <u>crevices</u>

Seek refuge during daylight in dark, protected areas

In heavy infestations, you will see them during the day

Prefer dry fabric, wood, and paper surfaces

- External parasites that feed on blood
- Humans are the preferred host However - also feed on birds, rodents, bats, pets
- Feed during the night with peak activity occurring just before dawn

Life Cycle

Life Cycle- Egg

- Female can lay 1-12 eggs per day
- Deposited on rough surfaces or in cracks and crevices
- Eggs are covered in a sticky epoxy-like substance
- Eggs hatch in 6-17 days

Bed bug life cycle: egg, nymph, and adult (courtesy of Dr. Mike Potter, University of Kentucky)

Life Cycle- Nymph

\$ 5 instar stages
 Require a blood meal to molt

Life Cycle- Adult

- May live for 12-18 months long lived for an insect
- Egg to adult in about 25 days under ideal (warm) conditions and available food source

In a home: development takes about 7 weeks

Blood Feeding

- Attracted by carbon dioxide and body heat
- Feed for 3-10 minutes, then crawl away to hide and digest blood meal
- Typically feed at night, but not always
- Can go up to a year between feedings
- Reaction to the injected saliva varies by the individual
 - Swelling
 - Rows of welts
 - Severe itching (hours to days)

Bed Bug Bites

Public Health Importance

- No evidence that bed bugs transmit disease
- Can cause irritation and the risk of secondary infection
- Feed on limbs, trunk, and face characteristic "bite line"
- Wheals/welts similar to mosquito bites or chigger bites reaction to salivary substances
- May cause restless sleep, chronic sleep deprivation, emotional stress, depression, suicide
- Cost to individuals

Prevention

- Don't bring infested items into the home
- Inspect clothing and baggage of travelers
- Inspect secondhand beds, bedding and furniture

Inspection tips: recognize common signs

- Blood stains from crushed bugs
- Fecal spots
- Shed skins & eggshells
- Offensive, sweet, musty odor

Inspection

Cracks and Crevices

- Mattress, box springs, bed frame
- Window and door frames
- Baseboards, carpet tack boards
- Radio, phone, TV, computers
- Wall hangings
- Drapery pleats
- Loosened wallpaper

Bed Bug IPM

IPM = PM that relies on a combination of common-sense practices that present the least possible hazard to people, property, and the environment

 Correctly identify the bug Use sanitation measures: -Remove clutter -Vacuum and discard bag -Wash and Dry clothes/linens (hot) Use non-chemical measures -Freezing treatments -Heat/steam treatments Apply insecticides labeled for bed bug use to targeted sites Keep accurate records Evaluate effectiveness of treatment

Eliminate Clutter

Vacuuming

Freezing

- Frozen CO2 (dry ice) that goes directly from a solid to a gas
- -108° F or colder

Commercial Steam Treatment

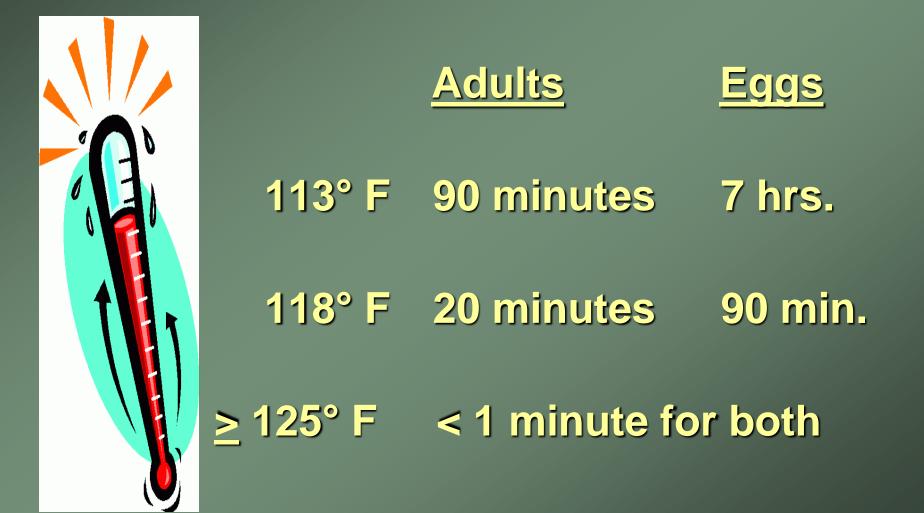

Steam Effectiveness

- Temperature of surface is approx. 160 ° to 180° F immediately after steam treatment
- Steam Heat Penetration
 - $-\frac{3}{4}$ " in fabric materials
 - $-2\frac{3}{8}$ " inches in gaps or openings

Time Required to Kill Bed Bugs Utilizing Heat

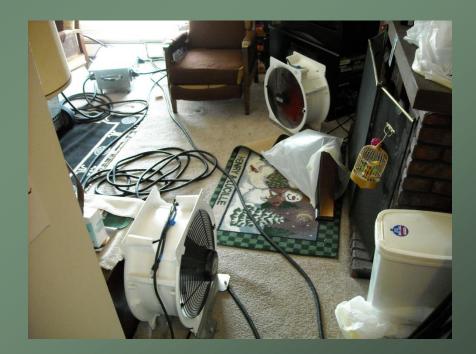

Heat Treatment
