

***Line list for Group Home Setting Residents and staff***

***Case definitions\****

When assessing a patient for symptoms, it is important to understand and use the appropriate COVID-19 case definitions for those being evaluated:

- **Confirmed Case:** Person with lab-confirmed COVID-19 infection
- **Case Contact:** Person with close contact with a confirmed case during the case’s symptomatic period
- **Possible Case:** Person with symptoms highly suggestive of a COVID-19 infection in the absence of lab confirmed COVID-19 testing
- **Presumptive Case:** Person with symptoms known to have had close contact with a confirmed case during the case’s symptomatic period who has not been tested
- **Presumptive Case Contact:** Person with close contact with a presumptive case during the presumptive case’s symptomatic period

*\*Note: CDC case presumptive case definitions (as noted on the updated PUI from released 3/29/20) relate to testing and differ from the above working definitions which are necessary for the local health department field response.*
